Description:

The RTC Module permits time and date information with a battery backed up Real-Time-Clock (RTC). It has one universal signal input and SAE J1939 CAN bus. The universal input can interface with a command signal (0-5V; 0-10V; 4-20 mA; Frequency or PWM) or it can serve as "clock synchronization" trigger. For example, the RTC date and time could only be set when the input is triggered. The device supports the Vehicle Identification Number message according to the SAE J1939 standards. The battery backup permits 15 years of operation. Power is 12V, 24V or 48Vdc nominal. The controller is ruggedly packaged for harsh operating environments.

Applications:

- Industrial Cranes
- Heavy equipment

Control Software

Software Platform	<p>Pre-programmed with standard logic. Refer to the user manual.</p> <p>SPN 237 Vehicle Identification Number is supported.</p> <p><i>Note: During the first start, the device's parameters are set to default. Also, the time and date of the RTC can be adjusted via CAN. So, it is possible to use the RTC module without the Electronic Assistant for default input type configurations. However, in this case, it will not be possible to change other parameters (such as an Input Type).</i></p>
